

**CRAFTING IDEA**

# Deco-cement knob "Circle"

[WWW.RAYHER.COM](http://WWW.RAYHER.COM)

## Used items:

<b>36029000</b>	Casting mould „Circle“ ø 5,5 cm	1 piece
<b>36052000</b>	Moulding Kit for deco knobs	1 bag
<b>34166000</b>	Jewellery cement	30 g
<b>3395208</b>	Crepla sheet 3 mm	some
<b>14562801</b>	Large hole glass bead 12 mm	1 piece
<b>38867102</b>	Chalky Finish	some

## Additionally you need:

Vessel to stir the cement, wooden spatula, cooking oil, brush, sandpaper, scissors

## Instructions:

**1** Carry out the preparation by cutting-out a circle from the crepla sheet to the size of the inner diameter of the casting mould. For added impact, cut out from the crepla circle a small "piece of cake", put the remaining circle in the casting mould and coat the sponge rubber as well as the casting mould with a cooking oil.

**2** Place straight the casting mould on the work surface. For a safe standing position, you could use a towel or a sand bed.

**3** Now, the screw set can be pre-mounted. For this purpose, you have to pull the screw through the holder and then tighten the nut so that the screw has an adequate size for the deco-cement knob.

**4** Stir 30 g of the jewellery-cement according to the package leaflet and pour it into the prepared casting mould. Position centrally the screw head.

**5** Allow to dry for 24 hours.

**6** The cast knob can now be removed by applying a slight pressure onto the back of the casting mould. Do not pull the screw! Clean the casting mould thoroughly with a detergent.

**7** Remove the crepla piece from the cement knob.

**8** You can use the sandpaper to remove unwanted unevennesses or small ridges from the knob. Allow then the knob to dry thoroughly and optionally paint it.

**9** Now you can attach the deco knob to your desired object. As small spacers you can put optionally one more large hole bead onto the screw.

**10** If the screw is too long for your drawer, you can easily pinch off the exceeding part using a suitable tool (e.g. the compound-leverage end cutter) and then sand it smooth.
